

WILLIAM GRANT & SONS

ROLE PROFILE

Role Title	Business Intelligence Developer
Internal Reference	CEN-0125
Business Unit / Group Function	Central Services
BU Team / Sub-Function	Group Technology Services
Location	Arete
Team Leader Role	Data Engineering Leader/ Data & Analytics Leader
Role Level	4B
Team Members	No
Role Purpose Provides technical expertise in designing, developing and delivering the WG&S data platform that will support reporting and analytics solutions for decision making aligned to the WGS Corporate GTS strategy.	
Accountabilities • Develop, deploy and maintain data, reporting and analytics solutions within the WG&S Data platform, ensuring outputs are trusted, governed and aligned to agreed data and reporting standards • Review and validate approved reporting and analytics requirements, translating the findings of the data platform analyst into technical designs and implemented change across pipelines, reports, semantic models and data sets. • Ensure deployed solutions align with reporting and analytics governance principles, business requirements and service delivery standards • Develop and maintain technical documentation (i.e. Report Design Specifications, Testing templates, release notes, etc.) to support traceability, maintainability and continuous improvement • Deliver and maintain the WG&S Data platform to support critical to core business processes and cycles, including but not limited to FX/LYA/5YP/FYE/Budget/S&OP • Support the promotion of new and changed analytics content throughout the development and release lifecycle, in line with change, testing and deployment standards • Apply strong data modelling and data platform knowledge to evaluate and implement appropriate analytics solutions, ensuring designs remain scalable, performant and aligned to platform patterns • Contribute to the continuous improvement in process, performance, productivity and quality in line with business standards • Proactively share knowledge with other team members, updating and documenting procedures to the required standard • Provide end-to-end system support for the data platform including but not limited to ensuring support calls are closed within service level targets and system uptime meets agreed business targets
