

WILLIAM GRANT & SONS

ROLE PROFILE

Role Title	AI & Automation Engineer
Internal Reference	TBC
Business Unit / Group Function	Central Services
BU Team / Sub-Function	Group Technology Services
Location	Arete
Team Leader Role	AI & Automation Delivery Leader
Role Level	4B
Team Members	No
Role Purpose Design, build, and deploy secure AI and automation solutions that improve business processes, reduce manual effort, and enable scalable digital capabilities. The role integrates AI technologies with automation platforms and enterprise systems to deliver measurable business value, aligned with architecture, security, and governance standards. Working with delivery teams, architects, and business stakeholders, it supports the organisation's AI-first and automation strategy through modern engineering and continuous improvement.	
Accountabilities Develop AI and automation solutions using enterprise platforms, APIs, and cloud services to improve efficiency and reduce manual effort. Build, test, and deploy scalable automation workflows aligned to architecture, security, and governance standards. Integrate AI models and services into business applications to enable intelligent decision-making and improved user experience. Translate business requirements into repeatable, scalable, AI-first solutions across systems and platforms. Build and maintain end-to-end data and process automation pipelines across cloud and on-premises environments. Ensure solutions are secure, compliant, and aligned with identity, access, and data protection policies. Optimise performance, scalability, and cost efficiency through monitoring, tuning, and continuous improvement. Implement CI/CD pipelines and infrastructure-as-code to support controlled, repeatable deployment across environments. Monitor, troubleshoot, and enhance deployed solutions to maintain stability and realise business value. Contribute to standards, architecture patterns, technical documentation, and the evaluation of new AI and automation capabilities.
