

Job Title	OT (Operations Technology) Engineer
Business Unit / Group Function	OBU
BU Team / Sub-Function	Distilleries Engineering Team
Location	SBP
Team Leader	OT (Operations Technology) Engineer Team Lead
Team Members	No
Job Level	4A
Role Purpose To ensure the secure, reliable, and compliant operation of Operational Technology (OT) infrastructure and industrial control systems (ICS) within WG&S Operations Business Unit.	
Accountabilities • Develop and maintain OT and ICS architectures to distilling and bottling functional and non-functional requirements. • Ensure robust connectivity between OT and Company IT systems while maintaining segmentation and cybersecurity best practices. • Apply national cybersecurity frameworks (e.g. National Cyber Security Centre Cyber Assessment Framework) principles to OT environments, focusing on risk management, access control, and incident response. • Manage all OT projects to deliver the OT plan across all distilling and bottling sites that are not covered in the normal scope of the maintenance teams and through pre-planned maintenance activities. • Coordinate firmware updates, patching, and configuration changes through structured change control processes with maintenance teams • Monitor OT systems to ensure uptime and rapid fault resolution across critical distilling and bottling processes. • Lead root cause analysis for OT-related incidents, minimising impact on production. • Maintain documentation including OT policies and standards, network diagrams, risk registers, and improvement plans. • Work GTS, Engineering, Maintenance, Quality, and Compliance teams to deliver OT plans and achieve business objectives. • Provide technical input during onboarding of new equipment, upgrades, and digital initiatives (e.g., smart factory rollouts). • Report on OT system health, vulnerabilities, and remediation activities to stakeholders.
